# Manufacturing 100

***Take your manufacturing to the next level.***

**Manufacturing 100 is a highly flexible, mobile, and adaptable barcode data collection solution that is ideal for manufacturers using Sage 100/Operations Management software.**

### Optimized for Sage 100

- Fast & Accurate
- Live Monitoring
- Cost Effective

## Manufacturing 100 delivers just what you need, when and where you need it.

Every point in the manufacturing process where you rely on employees to write down or enter information manually is an opportunity for error. Re-entering data from timecards or job tickets is costly and wasteful.
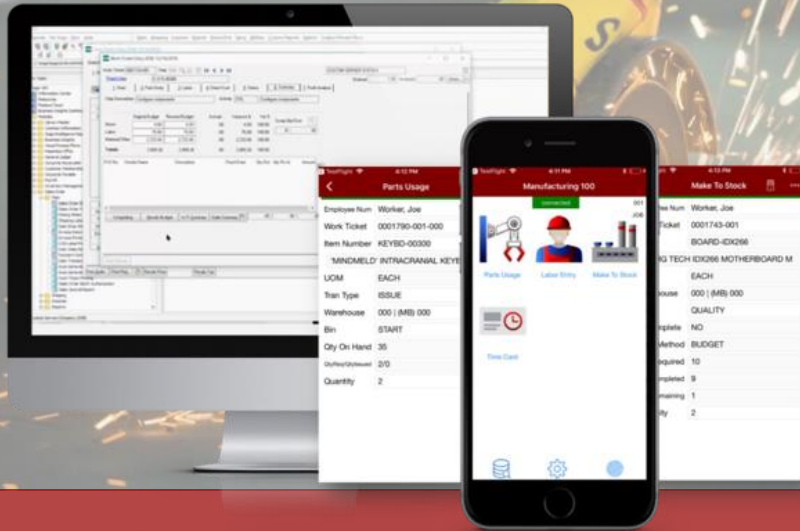

Manufacturing 100 eliminates manual data entry tasks, delivering immediate access to accurate, up-to-date information. Easy and intuitive to use, so your payback begins immediately—not after a lengthy training and implementation period.

It performs all the standard tracking functions like Material Issues, Labor Tracking, Status Updates, Finished Goods Entries, and Timecard.
